# Schools!

**Ask these 4 questions when shopping for EdTech software**

**1**
### Is it user-friendly?

Good software is user-friendly for students *and* teachers.

**2**
### Is it easy to track student progress?

Teachers need to be able to easily assess student progress and administrators should be able to easily view usage data.

**3**
### Is there proof that it works?

There should be demonstrated efficacy that the tool is pedagogically sound, ideally in the form of an independent study.

**4**
### Is the company's customer service good?

If so, software integration into your existing curricula will be infinitely easier.
